

Security and Telecommunication Solutions

Cyber Operations provides total customer solutions in security and telecommunications through Network Security, Network Access Control and Maintenance, Biometric Access Control, Digital Media Distribution, Video Monitoring Components and Tadiran Telephone Systems.

Located just south of Birmingham in Pelham, Alabama, Cyber Operations has developed a comprehensive family of integrated security technology tools for government, commercial enterprises, and financial institutions.

Cyber Operations and its affiliates are comprised of several individual collaborative divisions focusing on next-generation advances to critical communication infrastructures and security. The integrated array of products reduces costs and provides superior service to customers. Cyber Operations brings significant advances and evolutionary changes to commercial markets that rely on information management, and security for a company's internal operations.

Through Cyber Operations' integrated solutions, government, commercial enterprises, and financial institutions can affordably enhance the efficiency, effectiveness, and security of managing, transmitting and delivering information.

Cyber Security Services - A well-rounded security regimen is more than just building the best firewall. Cyber Operations takes a holistic approach to the security challenge with a 360 degree review of your network's security posture, from PCI compliance and security architecture to access control, exposure to risk, and incident management policies.

Cyber ACL™ - Cyber ACL - Access Control List Management - enables you to update your network security policies across the entire network in minutes instead of hours or days. Maintain one centrally managed set of policies and deploy it to multiple types of devices, instead of worrying about the differences in device syntax yourself. You gain advance troubleshooting features, version control, and role-based access control to your policies themselves.

Cyber Telecom™ - Cyber Operations provides state of the art solutions for business communications. We have partnered with Tadiran Telecom to offer solutions to meet your company's telecommunication needs. Systems can be used as a traditional switch, a VoIP telephony server or both - adapting easily as your company's needs change. Scalable from a few stations to more than 4000, our applications migrate telephones, trunk and station cards, voice messaging, database and common control elements from the smallest to the largest system.

Cyber BAM™ - Cyber BAM let's you take control of your organization's security with your fingertips! Lost proximity cards and keys are a thing of the past. Cyber Operations' Cyber BAM - Biometric Security Access Management - solution is a highly-secure verification system that provides complete access control and management to the secured areas throughout your organization.

Cyber VSS™ - Cyber VSS - Video Surveillance Solutions - software loads onto your PC and connects to standard CCTV or IP Network cameras. The unique peer-to-peer software design supports 32 analog and 10 IP cameras per server, with no limit on the number of servers. This approach allows users to leverage their current IT infrastructure including: servers, cameras and disk storage devices, lowering overall costs. Cyber VSS allows you to transform a PC into a next generation Digital Video Recorder (DVR).

Cyber SWAT™ - Included as a feature of our Cyber Operations Cyber VSS Video Monitoring Systems, Cyber S.W.A.T - Surveillance Wireless Access Terminal - allows you to have wireless access to view an entire video surveillance landscape, right from your existing computer systems. Cyber SWAT inter-operates compatible security technologies. You can log on to the Cyber S.W.A.T terminal using a secure login to view the facility's camera system, in real time --- giving you rapid intelligence and situation analysis. This helps you map best plan of deployment of officers and responders on your team.

Cyber Redact™ - Cyber Redact automated software redaction offering can significantly help an organization safely and permanently remove sensitive and private information within records, documents and images with structured and unstructured documents.

Cyber DAN™ - Cyber DAN - Digital Advertising Network - is an extremely cost-effective, user-friendly solution for the display of any media. By requiring little in the way of resources and maintenance with Cyber DAN you can dramatically increase control and reduce your costs for media distribution.
