

Cyber Operations, Inc.

Investor Fact Sheet

December 2009

NASDAQ: CYPJ

Cyber Operations Inc. (CyOps) is a security and communications company serving clients with innovative solutions through:

- Network security
- Network access control and maintenance
- Digital media distribution
- VoIP telecommunications solutions
- Video monitoring services
- Biometric access control
- Redaction technology services- Q1 2010 (automated removal of sensitive data)
- PCI Compliance Services (Q2 2010)

Established in 1999 and headquartered just south of Birmingham in Pelham, Alabama CyOps has developed a comprehensive family of integrated security technology tools for the government and commercial enterprises.

CyOps newest Financial Services Division (FSD) was established in October, 2009 in Orlando, Florida to serve the financial industry. In today's challenging economy with high unemployment rates and record foreclosures companies must not only seek to find ways to reduce expenses but they must also do more with less operating with maximum efficiency.

CyOps is pleased to announce the launch of its new web site and brochure content in October, 2009. New proposal and presentation templates have been launched with the same look and feel design. Cyber products have also been named for full market penetration with the enterprise community and pricing models were restructured into a shared services model. This model allows the small to mid-sized enterprises to benefit from our robust security software applications. **Cyber Network Access Control** software application was initially developed for and with the federal government. **Cyber DAN** (Digital Adversing Network) software has been perfected for over 8 years with enhanced security features to protect content and eliminate the possibility of unauthorized access. DAN users have the ability to dynamically change content and messaging from any location with multiple partitions of data and screen crawls on one monitor.

Cyber Operations, Inc.

The ability to safeguard small to mid-sized enterprises will open up an exciting market for CyOps. According to the Cyber Crime Division of the FBI, "there are tens of thousands of attacks daily and many network breaches are not made public."

In 2010 CyOps FSD will launch two new service offerings that will further safeguard clients from security threats while mitigating risk.

- **Cyber Redaction** will remove sensitive data like social security numbers, credit card numbers, account information through an automated process and application that recognizes forms types and removes the sensitive data for clean distribution and compliance with privacy and HIPAA regulations
- **Cyber PCI** will assist clients with gap analysis and security assessments for PCI compliance.

There have been 356 data breaches so far in 2009, according to the Identity Theft Resource Center (ITRC). And 46 of those breaches have involved financial institutions - up from 34 at this same time last year.

CyOps Growth Strategy:

- New offerings will cater to security and compliance issues with high value services
- Revamped sales strategy with larger deal focus
- New channel strategy with select companies for maximum distribution
- Innovative shared services pricing models
- Small to mid-sized enterprises can now tap into CyOps's robust solutions
- Expansion into the Credit Union and Banking markets
- Leveraging existing high C-level relationships with new FSD leadership
- Enhanced client centric model
- Outstanding delivery execution with high client/member satisfaction

Cyber Operations, Inc.

Cyber Operations Solutions

Cyber NAC – Network Access Control

Cyber NAC Compliance Director provides an enterprise level solution for management of complex network traffic policies by multiple IT personnel. Policies are stored on a centralized system with user access control and secure web access for management.

Cyber DAN – Digital Advertising Network

Cyber DAN, the cost effective, user friendly, digital signage system that provides creative control to the customer; an easy to use content management system that empowers businesses with the flexibility to instantly deploy digital advertising to unlimited consumers when and where it matters most.

Cyber Redact – Redaction Services

Redaction (permanent removal of sensitive data within a record or document) is a powerful software application tool that permanently protects sensitive data for federal, state and local government entities and enterprise markets.

Cyber Telecom - Business Communications

Cyber Operations delivers voice, data and business application designed specifically for business customers. So whether it's data, high-speed broadband Internet, networking and data security, or local we've got what you need.

Cyber BAM – Secure Access Control

Take control of your organization's security with your fingertips! Lost proximity cards and keys are a thing of the past. Cyber BAM is a highly-secure verification system that provides complete access control and management to the secured areas throughout your organization.

Cyber VSS – Video Surveillance Solutions

Cyber Operations completes this security package by offering our Cyber VSS video surveillance solution.
